

rddapp documentation style guide

Irena Papst

Some notes to keep the writing and formatting style consistent within the docs for rddapp, including the shiny help page and the rddapp vignette.

Headers

- Header levels are as follows:
 - 1: Page (e.g. Model, Power) or major tabs (e.g. Data, Estimates, etc. on Model page)
 - 2: Panels within pages
 - 3: Anything within tabs/panels
- Header anchors should be all lower case, with spaces replaced with underscores:
 - ## Data tab {#data_tab}
- Headers should be in Sentence case.

Text formatting

- Bold terms that are direct references to objects in the app interface (e.g. the **Data** panel, not the **Data panel**). Only bold the keyword (e.g. Data, Browse, gear), not the descriptor (e.g. panel, button, menu). Do not bold keywords in headers.
 - Discretionary bolding of other **keywords** is also helpful.
- Any software (R, rddapp) or code (`function()`) should be formatted as an inline code snippet (enclosed in ' marks).
- Use [embedded links](#) where possible (instead of plaintext urls).
